484	Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions [1]	37.08	35.39

[1] A lower performance rate corresponds to higher quality.

[2] CAHPS for MIPS Survey is a composite measure, so numerator and denominator values are not applicable (N/A). The Reported Performance Rate column shows the CAHPS for MIPS Survey composite score. The CAHPS for MIPS Survey composite score is calculated as the average number of points across scored Summary Survey Measures (SSMs). Refer to Table 5 for details on CAHPS for MIPS Survey performance.

[3] For PY 2023, the CMS Web Interface measures Quality ID#: 438 and Quality ID#: 370 do not have benchmarks, and therefore, were not scored. They are, however, required to be reported in order to complete the Web Interface measure set. If they are not reported, the CMS Web Interface measure set denominator is increased by 10 points for each measure that is not reported, resulting in a lower health equity adjusted quality performance score. For more information, refer to the Performance Year 2023 APM Performance Pathway: CMS Web Interface Measure Benchmarks for ACOs <https://qpp.cms.gov/resources/document/a393204f-a4d3-49f6-a46e-aa1134a89e34>

For more information on the 2023 Quality Benchmarks and the future direction of quality benchmarks for 2024:

<https://qpp.cms.gov/benchmarks>

[4] For PY 2023, ACOs that report quality data via the APP and do not meet the quality performance standard can meet the alternative quality performance standard. To meet the alternative quality performance standard, ACOs must achieve a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least 1 of the 4 outcome measures in the APP measure set.

[5] Equals Yes if the measure is an outcome measure for purposes of determining the alternative quality performance standard. Otherwise equals No.
